# INTERMODAL
PRO™

BOOST YOUR BOTTOM LINE WITH THE **INTERMODAL TERMINAL OPERATING SYSTEM** THAT DOES IT ALL

OPTIMIZE

Optimize Precious Resources
Improve throughput by drastically increasing yard and equipment utilization.

Plan Trains in a Single Click
Automate load planning on every train using powerful, graphical planning tools that help you control all aspects of your operation.

Save Big on Implementation Costs
With our innovative integration model, a highly configurable TOS, and our skilled deployment team, we can implement quickly with less customization.

View data the way you want to see it

- View key data at a glance with color-coded views, customizable lists, and single-click data recaps
- Save time with a powerful Find Tool, and the ability to save searches for repeated use
- Easily run custom reports on your own

Optimization & automation

- Maximize yard utilization and automatically calculate parking stall and decking assignments
- Select the optimal location at the moment a unit is unloaded using the "just in time" yard planning functionality
- Use the "live lift" feature to direct incoming gate traffic to trackside locations based on configurable rule sets
- Configure loading rules and train routing to load plan rail cars in a single click
- Boost equipment utilization with simultaneous load and unload planning

Seamless Integration

- Real-time integration with the Traffic Control™ dispatch system automates delivery of work orders for container handlers and UTRS
- A purpose built, proprietary integration module simplifies communication between Intermodal Pro and third-party systems
- Optional integration with OCR, DGPS or other automation technologies reduces the level of operator interaction and sharpens inventory control
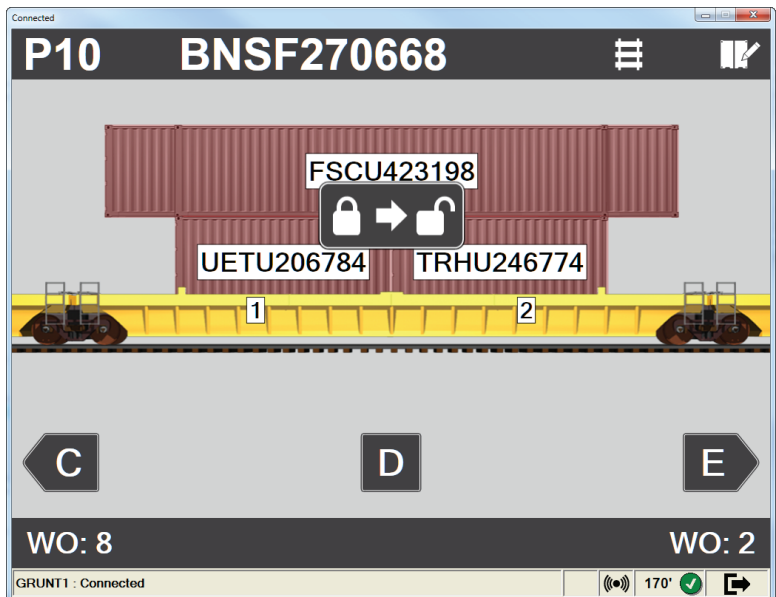

Comprehensive feature set

- Automated Load Planning
- Inventory Control
- Chassis Pool Management
- Gate Operations
- Switch Plan Evaluation & Execution
- Electronic Data Interchange (EDI)
- Current and Anticipated Cone States
- Just in Time Yard Planning
- Live Lift

Graphical Planning
Plan trains faster with smarter graphical planning tools to help you control the entire operation.

Traffic Control
Use Traffic Control's handheld client to verify accuracy of container information and cone states.
